

ESKA VALVE is gas equipment producer (Gas Pressure Regulators, Gas Filters and Valves) in Turkey since 1968. Our certified products are being used in civic and industrial areas all around the world.

For 50 years, our product portfolio, operations and ESKA VALVE family has grown and still keep growing. Ingenuity, reliability and hard work led us to be the market leader in Turkey and expanded our international operations in more than 30 countries in global scale. By the time you read this text, probably we will be reaching out another locations and placing our products into grids.

By examining, following and applying 133 national and international standards from our R&D Department library, and with our Quality Department's deep commitment to test each and every product on over 100 inspection-test points have made us to produce annually more than 1.000.000 accurate and reliable unit products which 52 gas distribution companies trust worldwide .

Hope to gain your trust and see you in our ever-growing family.

DIRECT ACTING GAS PRESSURE REGULATOR

100

y.

100

100

20

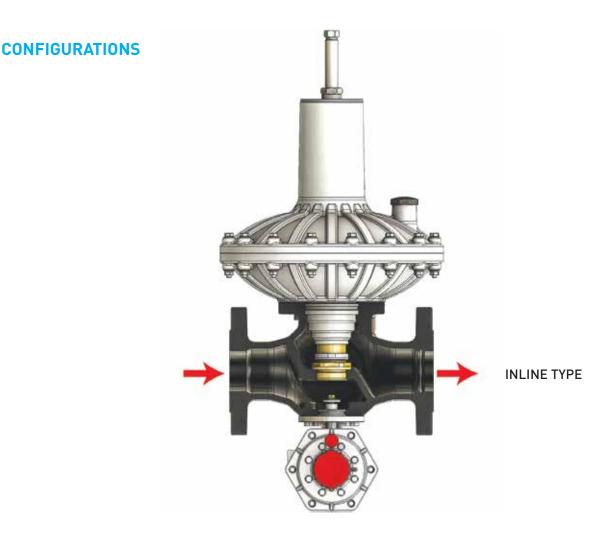

ERG-H6 Series pressure regulator is used on gas line to reduce inlet pressure to desired outlet pressure.

It is mainly used in Distribution of Natural Gas and also suitable to use with non-corrosive gases. ERG-H6 is a single stage direct acting regulator with a optional security systems such as relief valve UPSO and OPSO

Monitor version is also available.

#### **FEATURES**

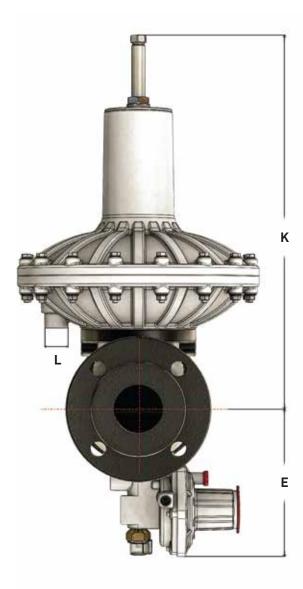

- For medium and high pressure domestic or industrial second group gas lines.
- Max inlet pressure 0,3 to 20 bar.
- Max outlet pressure 15-4500 mbar.
- Outlet pressure tolerance is ±%5-10 (AC5 & AC10)
- Lock up pressure tolerance is max +%10 (SG30 and SG20 is possible also)
- Can be integrated with Relief valve & UPSO & OPSO
- Temperature class as a standard -20 to +60 Celcius Degree. Low temperature series has ability to work under as low as -40 Celcius Degree.
- Flow direction inline type.

#### SAFETY AND ACCESSORIES

#### **Relief System**

Regulator can be produced with a relief valve. Relief valve monitors outlet pressure continuously and when it detects pressure level higher than regulator's nominal outlet pressure, it activates and discharges gas to the atmosphere.

Relief valve has limited discharge capacity. Usually calibration point is lower than OPSO system. Under certain conditions such as gas expansion during hot weather seasons, Relief Valve is activated before OPSO closes the gas lines. It prevents random shut-off regarding pressure increase on outlet side.

Relief valve can be recalibrated by using proper tools.

#### **Over Pressure Shut-Off System**

OPSO system is very useful during major breakdown situations and keeps the customer side safe. System works as a security valve and activates itself when the outlet pressure passes OPSO calibration point. OPSO system cuts the gas off, and manual reset is needed to activate the regulator again.

System has an independent shut-off mechanism and orifice and it monitors outlet pressure changes continuously, so activation time is below 2 seconds.

#### Under Pressure Shut-Off System.

- UPSO system on ERG-H6 series regulator is pressure based. It cuts the gas off when the outlet pressure drops below the UPSO calibration point.
- UPSO valve continuously monitors outlet pressure changes. Scenarios like, pipeline breakdown on outlet sides, or consumption is exceeding the total capacity of regulator or lack of inlet pressure situations etc...the outlet pressure drops and the regulator cuts the gas off once UPSO system is activated.

#### **SPECIFICATIONS**

Medium Operating temperature Assembly	: Natural Gas, LPG and Non-Corrosive Gases : -20 + 60°C (optional : -40 +60°C) : Vertical and Horizontal Position
Maximum inlet pressure	: 20 bar
Outlet pressure range	: 15 mbar to 4,5 bar
Conforming	: 2014/68/EU
Туре	: IS
Fail Mode	: Fail to Open
DN	: 1" (25) – 1"1/2 (40) – 2" (50)

#### DESIGN

The ERG-H6 Series pressure regulator body consists of :

- Valve housing
- Set up tool
- Breather consol.
- Over pressure shut off OPSO
- Under pressure shut off UPS0
- Furthermore the truly "top entry design" allows an easy periodical maintenance without removing body from the line.
- High flow rate coefficient
- High accuracy, even at maximum flow rates
- Reduced response times,
- Periodical maintenance without disassembling the body from the pipework,

#### MATERIALS

- Body is ductile cast iron
- Rubber components have gas approval according to EN 549
- Orifice is Brass
- Head covers is die cast alluminium EN AC-AISI 12

#### **CAPACITIES**

	L	P Version		1	<b>IP</b> Version	
Norminal Diameter	25	40	50	25	40	50
CG Flow Coffivient	275	665	792	326	704	781
KG Flow Coffivient	290	695	833	343	739	820
K1 Body Shape Factor	98	98	91	101	98	100

Sizing of regulators is usually made on the basis of Cg valve and KG flow rate coeffcients. Flow rates at the fully open position and the various operating

Q = flow rate in Scm/h Pe = Absolute Upstream Pressure in bar

Pa = Absolute Downstream Pressure in bar

When the Cg and KG values of the regulator are known, as well as Pe and Pa, the flow rate can be calculated as follows:

1- in non-critical conditions: (Pe  $\leftarrow$  2 x Pa)

Q = 0,52 x Cg x Pe x sen (K1 x 
$$\sqrt{\frac{Pe - Pa}{Pe}}$$
) Q = KG x  $\sqrt{Pa x (Pe - Pa)}$ 

2- in critical conditions: (Pe 🗇 2 x Pa)

$$Q = \frac{KG}{2} \times Pe$$

Q = 0,52 x Cg x Pe

ERG-H5 Series pressure regulator which is used on gas line to reduce inlet pressure to desired outlet pressure.

ERG-H5 series pressure regulators are suitable for commercial usage like Gas Skids where the maximum inlet pressure up to 20 bar and outlet pressure up to 2,5 bar.

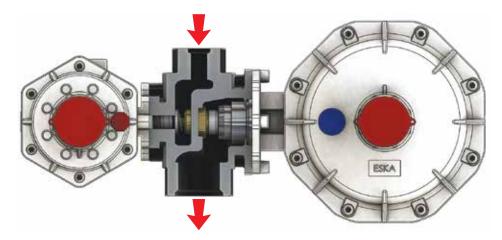

It is mainly used in Distribution of Natural Gas and also suitable to use with non-corrosive gases. ERG-H5 is a single stage direct acting regulator with a optional security systems such as relief valve UPSO and OPSO

#### **FEATURES**

- For medium and high pressure domestic or industrial second group gas lines.
- Max inlet pressure 1 to 20 bar.
- Max outlet pressure LPO : 15 to 100 mbar MPO : 100 to 300 mbar HPO : 300 to 2,5 bar
- Optional filter on inlet.
- Outlet pressure tolerance is ±%5-10 (AC5 & AC10)
- Lock up pressure tolerance is max +%30 (SG30,SG10 and SG20 is possible also)
- Can be integrated with Relief valve & UPSO & OPSO
- Temperature class as a standard -20 to +60 Cantigrade Degree. Low temperature series has ability to work under as low as -40 Centigrade Degree.
- Flow direction inline

ERG-S Series double stage pressure regulator is used on gas line to reduce inlet pressure to desired outlet pressure. It is suitable for both commercial and domestic usage where can be directly installed to gas meters with high operation-

al reliability and accurate outlet pressure accuracy.

Simple installation procedure.

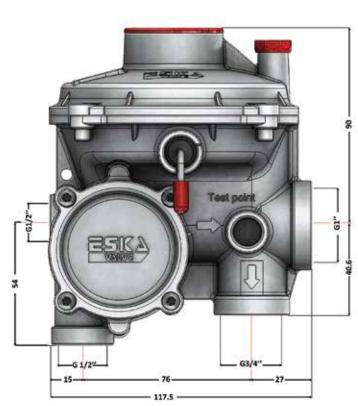

Due to different inlet and outlet connection range, ERG-S Series can be used along with pipe diameter from DN15 to DN50 with different thread standards as well as BSP, BSPT, NPT, NPP.

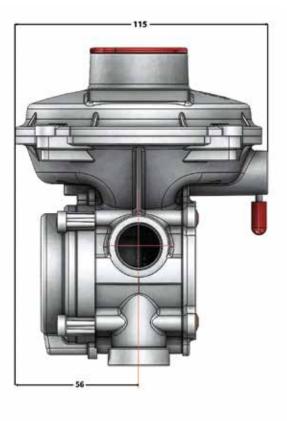

The modular concept of ERG-S and wide range availability of inlet and outlet connections allow to match particular customer requirements.

The regulators are manufactured according to **Ped Directive 2014/68/EU**. The functional tests are performed according to **EN334.** 

### **FEATURES**

- For medium pressure domestic or commercial second group gas lines.
- Optional metallic mesh filter for easy change and guarantees longer operation life of regulator.
- Outlet pressure tolerance is +%10 (AC10) up +- %5 (AC5)
- Lock-up pressure tolerance is +%20 (SG20) up to 100 mbar outlet pressure, more than 100 mbar outlet pressure SG20 and SG10 possible.
- Up to 6 bar inlet pressure.
- 18 500 mbar outlet pressure range with interchangeable springs **Optional ;**
- Incorporated Under Pressure Shut Off Valve.
- Internal Relief Valve

Maximum inlet pressure	: 6 bar
Outlet pressure range	: 15 to 360 mbar.
Referring	: Ped 2014/68/EU
Filter	: Included

#### DESIGN

The ERG-SR Series pressure regulator body consists of:

- Loose nut or body thread or flanged connection
- Filter
- Ventilation console
- Outlet pressure test point
- Integrated security valves

#### MATERIALS

- Body and covers Aluminum comply with EN1706 standard.
- Rubber components comply with EN549.
- Brass materials comply with EN12164 Standard.
- Filter material is metallic mesh filter.

#### MODELS

MODEL	NOMINAL CAPACITY	REQUIRED MINIMUM INLET PRESSURE BAR (PSI)
ERG-SR 50	50 STM3/H	OUTLET PRESSURE + 0.5
ERG-SR 75	75 STM3/H	OUTLET PRESSURE + 0.5
ERG-SR 100	100 STM3/H	OUTLET PRESSURE + 0.5

## **INTRODUCTORY**

ERG-E series gas pressure regulators are used in the gas lines in order to reduce maximum 1 bar input pressure to the desired output pressure between 16 and 150 mbar. The range of the output pressure can be set with the choice of a different spring. The regulator with safety stopping gets automatically active and stops the gas flow in case that the input pressure gets higher or lower than the adjusted value in order to ensure the safety of the devices used in the system thanks to the safe stopping system it includes.

#### **INTRODUCTORY**

EGF model gas filters are the elements that seperates the dust particles carried by the gas or very small particles spread within the gas (for example: dust and rust), holds these and protects the burner, gas counter and adjustment devices which may possibly be damaged. Dust, woodchips, smut and other physical substances and dirt in the gas are held by the fiber. When the dust tank capacity is exceeded or a very high pressure difference effected, the filter loses its filter protection function. The filters are resistant against the mechanical and thermal stress that occur under operational conditions. The device must be kept away from rain and water as much as possible.

# MECHANICAL ACTUATED SEISMIC VALVE SERIES

# www.eskavalve.com

### **MECHANICAL ACTUATED SEISMIC VALVE**

EMV Series Earthquake Valve is a shut off valve which is activated during seismic oscillation. Activation and non-activation waves are defined in TS 12884 Turkish Standard. This Turkish standard is created based on ANSI Z11 standard in United States. Once mechanical actuation system sense the seismic oscillation, valve will shut the gas off and you should rearm manually in order to reactivated gas flow. This valve basically is a manual reset, normally open gas valve. Main aim to decrease the risk of fire related to gas leakage, in case of earthquake occurs. In countries that this safety system is avaliable, main regulation is done by fire safety department.

## INTRODUCTORY AND TECHNICAL INFORMATION

EAC model gas alarm device is an A type device, which complies with the EN 50194-1 standard, designed to be used at homes, offices and similar places to detect the explosive gases (natural gas and LPG). It is an electrical alarm device constantly working, set on a stable place and which creates an output signal that activates the stopper and/or auxiliary device with a visual and audial warning. It works with 230V AC 50/60 Hz network voltage. It makes the devices like horn, siren, gas stopping valve in case of an alarm thanks to its output contact.

The limit of the concentration level of the gases in the environment at which explosion or sparkling is called Lower Explosion Limit (LEL).the LEL level of the natural gas is 5% and the LEL of the LPG is 2%; the gas alarm device starts audial and lightened (visual) warning before the gas leak reaches one-fifth of this value. Visual and audible alarm is received between the 3% LEL volume rate and 20% LEL volume rate of the gas.

The alarm adjustment level of the device for natural gas is %0,5 (five in a thousand) or 5.000 ppm (five thousand in a million) (5%).

The alarm adjustment level of the device for LPG is % 0,2 (two in a thousand) or 2.000 ppm (two thousand in a million) (5%). The device can't detect the gases with hazardous effects such as carbon monoxide.

The visual and audible alarms of the gas detection device works within 30 seconds at most after the device is exposed to the gas volume it needs to detect.

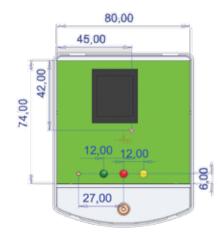

The operation and feeding voltage of the product is 230VAC. The product can perform all its functions with 10% of the operation voltage.

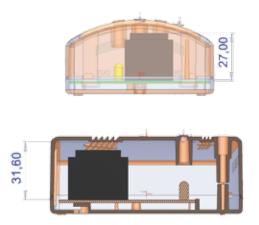

The device must be kept away from the rain and water.

- Usage : Home, Office etc.
- Detects Gases : Methane (natural gas), LPG
  - (liquefied petroleum gas)
- Device Type : Type A (visual alarm, audible alarm and output signal)
- Operating Voltage : 230V AC 50-60 Hz ; ± %10
- Power Consumption : 3VA
- Protection Class : IPX2D
- Output Signal (relay contact)
  - ) : 230V AC / 7A (normally open)
- Sensor Type : Semiconductor
- Calibration Time : 1 minute

- Response Time : 30 seconds
- Sound Intensity : 85Db
- Body Material : ABS
- Ambient Temperature Range: -10°C up to 50°C
- Operating Humidity : 10% 90%
- Visual Warning : Green-System Enabled Error
   Yellow, Red-Alarm
- According to Directives
  - According to Standards
- : EN 50194-1, EN 50270, EN 60335-1

: 2006/95/EC, 89/336/EC

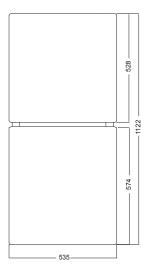

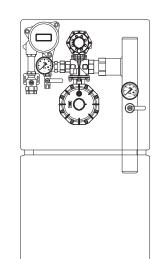

## S300 Wall Type Cabinets

Usage : Gas networks, industrial and domestic users Dimensions : 210 x 535 x 1122 Flow Range: up to 500 m3/h Regulator : ERG-H5 [ link] Inlet Pressure Range: up to 6 bar Outlet pressure Range: 15 mbar to 2,5 bar Inlet Connection: CAL25 (suitable for PE connection) Outlet Connection: 2" Security Options: OPS0-UPS0 Set Includes : B12 filter , gas pressure regulator, inlet and outlet manometer, S300 NonFlammable composite cabinet, cal 25 valve, inlet and outlet relief valves, 2"outlet pipe
